Subject: RE: questions

Bari,

The October 2013 event was the last of the quarterly sampling events that EPA requested as part of the Supplemental Feasibility Study activities. These data were requested by EPA as a refresher to the older set of data previously collected during the RI/FS. We are currently preparing a comprehensive groundwater report that summarizes the data, although your observation that there is not migration of radionuclides at the site is supported by the data. Also of note, the well located on your property does not show any radionuclide levels above background. This report will likely be submitted in 1-2 months. I can drop you a line to tell you when it is available on-line. If you need anything in the meantime, please feel free to contact me.

Subject: Re: questions

Greetings:

We have reviewed the monitoring well report you have listed below. Lots of information to process. Please keep us informed of the 2014 sampling scheduled. Please take a look at the following questions:

1. Has any groundwater sampling been conducted in the 1st quarter of 2014? If so, what will be the time frame that the data will be completed and posted on line? - an approximate time frame. (we are aware of the soil sampling conducted at the Athletic complex in Bridgeton).
2. What are trends you can share with us. Trends we have noted consists of radioactivity remaining in the landfill and not moving off-site in the groundwater. Please provide us with details for additional trends from the analytical data.

Thank you and we look forward to hearing from you.

Subject: questions

Bari,

Below is a link to the EPA website where the West Lake groundwater monitoring reports are posted. This link is for the October 2013 event (the last West Lake event). I figured that this report might be useful to you in understanding our monitoring program for the West Lake facility. If you have further questions, please don't hesitate to contact me.
